

Upgrade to FireGUARD RADIO Fire Alarm Monitoring

Traditionally, fire alarm systems use two analog telephone lines for monitoring. Those phone lines add a significant cost to the monitoring of the system. With a business phone averaging \$55-\$75, the cost adds up. In phone lines alone, you could be paying up to \$1,800.00 annually.

Now you can save that money with radio fire alarm monitoring.

Using technology perfected for the military, Commercial Fire & Security is providing FireGUARD Radio Monitoring, a radio alternative to using archaic and expensive analog telephone transmission.

FireGUARD Radio Monitoring uses an advanced network of radio transmitters and receivers located strategically throughout the United States. This sophisticated cell radio network allows for quicker and more reliable transmission to the Commercial Fire & Security Central Station.

Take advantage of these **BENEFITS** with FireGUARD

Radio Fire Alarm Monitoring:

- Savings of up to \$1,800 on average per year on monitoring costs alone. No telephone lines required
- Works with existing systems
- Code compliant
- Quicker response time, 2 to 3 second transmission to central station vs. 45-60 seconds
- Less vulnerable to lightning damage through telephone line pathway
- Continual polling for connectivity verification

If you've discovered the savings of **FireGUARD radio monitoring**, find out how fast you can get this service for your business. Request a fast, **no obligation quote** today.
