

# Video Surveillance

Every business owner and manager knows the value of keeping a watchful eye on employees, customers, and inventory. With Commercial Fire & Security Video Surveillance system, you will have the tools to monitor your business, factory, school, or any other facility and keep things running smoothly. Our remote access technology allows you to monitor a single location — or multiple sites — from the comfort of your home, office or anywhere in the world.

## Video Verification

Commercial Fire & Security working with several major manufacturers, has developed a new concept in security. By combining video cameras into our motion detectors we are able to actually “SEE” the cause of an alarm. And the results are absolutely amazing! We call the new system OVV, or Offsite Visual Verification. The OVV system also acts as an event-driven video surveillance system. For example, the same motion detector that is watching the back door can record and store video clips of people entering and exiting through the door. Each video clip is time & date stamped for easy retrieval. Since only short video clips are stored for events, there is no need to scan through hours of recorded video.

You can securely view the videos from any computer with Internet access. In the event of an alarm condition, such as a holdup or burglary, the alarm signal is transmitted to our central station along with a short video. The central station operator can then determine the validity of the alarm and give the police dispatcher a full description of what is seen in the video. Many police departments have facilities to electronically receive these videos. But the best part is that false dispatches are virtually eliminated.

### Video Surveillance systems pay for themselves through:

- Reductions in shoplifting, theft and fraud
- Increased employee performance
- Increased customer service
- Protection against false insurance injury claims
- More efficient use of management personnel

Commercial Fire & Security uses the latest technology to custom-design a system specifically for your application.

### Typical systems use:

- Fixed or Pan & Tilt Domed Surveillance Cameras
- Covert Cameras
- Flat-Panel Monitors
- Digital Video Recorders
- Remote Access Gateway

## Offsite Video Storage - OVS:

Offsite Video Storage (OVS) is the latest video innovation introduced by Commercial Fire & Security. Our OVS service utilizes your existing broadband connection to transmit video from your surveillance system to our secure video servers. Video can be viewed at any time, from anywhere in the world through a Web browser.

OVS also allows you to view live video from multiple sites simultaneously from your Web browser. It is simple to configure your computer screen to watch the cash registers from 1, 2, or up to 8 locations at the same time, even if each register is on opposite sides of the country!

## Video Guard Tour:

Video Guard Tour by Commercial Fire & Security is the perfect solution to the monitoring of outside storage facilities, schools, and unmanned complexes. Through the use of specially designed video transmission, a Commercial Fire & Security central station operator can make scheduled electronic Video Guard Tours at your facility. Cameras can be installed in areas that would be inaccessible or hazardous.

**Through the use of Video Guard Tours, your company can typically save 50% to 80% of the cost of an onsite guard or patrol service.**
